What is Bluescape?

Bluescape is a virtual work platform that creates a Common Operating Picture where teams can manage and interact with new data in real-time during planned and unplanned events.

Why Bluescape?

Teams use Bluescape for situational intelligence which enables faster, better-informed decisions, and streamlined after-action reporting.

 **Bluescape provides** a secure environment for teams to interact with each other, data, and information no matter where individuals are located. End-to-end encryption, and secure hosting options mean team members are protected no matter where they are.

 **Bluescape creates** a single source of truth for preparing, managing, and reporting on any event. Avoid inefficiencies caused by shifting between tools and documents. Embedded synchronous and asynchronous communication ensures everyone is up-to-date.

 **Bluescape enables** your organization's existing tools to work together on day one. As needs change, our API allows custom builds that enable data to flow into workspaces from other applications tailored to the needs of your organization.

 **Bluescape scales** with global organizations by providing enterprise-ready user roles and permission. Access to data can be customized to meet the needs of any organization, and can sync with existing tools.

Gain Decision Advantage with Bluescape

Whether connecting dispersed workers, maintaining a Common Operating Picture with existing tools, managing a SOC/NOC, or responding to critical and unexpected incidents, Bluescape gives your teams the ability to maintain Situational Intelligence, on one interface, by visualizing your mission critical data from any location, unifying all sources of content to aid decision-making, with extensible security measures.
