

Mission-focused for the U.S. Air Force

Accelerate decisions with command-level visualization

CHOOSE BLUESCAPE FOR INFORMATION SHARING, PLANNING, AND DATA ANALYSIS

- Built from the ground up for data visualization and analysis, operational planning, and situational awareness in the military
- Supports scaled agile methodologies for continuous development and speed
- Integrates with the tools you need to handle large data loads at the speed the mission requires.
- Easily scale deployments up or down across physical, virtual, and hybrid operations centers

MISSION-READY SECURITY

- Trusted by federal agencies: DISA IL-4/5 certified and FedRAMP Moderate certified.
- Complies with NIST CSF, NIST 800-171, FIPS 140-2, and ISO 27001
- Authority to Operate at the Top Secret Level.
- Authority to operate in the U.S. DoD: NAVSEA ATO at IL4/IL5 for CUI and DISA ATO and Support for ITAR
- In sponsorship for ATO on SIPR

Operational complexity continues to increase for Air Force missions, as well as the data and collaboration required in every plan and action. Effective response requires a single pane of glass solution that can pull multiple data sources into command processes. To drive informed decision-making. To foster real-time, planning cycles. To harness the insights from AI and ML analysis.

When gathering in person can be impractical or impossible, Air Force teams need a way to seamlessly and securely share information, plan, collaborate, and harness situational awareness as if all parties were together. Meet Bluescape.

As the most secure and advanced visual collaboration solution, **Bluescape** addresses the diverse needs of the **Air Force** across its globally dispersed operating units by bringing data, tools, and expertise together in a virtual workspace.

Bluescape addresses common Air Force challenges:

- Collaboration and planning among geographically dispersed teams
- Secure and timely information sharing
- Creating situational awareness
- Real-time responsiveness to emerging mission needs
- Visualization of multiple and disparate data streams, formats, and analysis
- Connectivity and access to information beyond meetings

Bluescape is a catalyst for mission responsiveness, giving the Air Force the virtual workspace needed to plan missions, assess intelligence, and solve problems in a persistent and unbound virtual space.

Integrate situational awareness and analysis into real-time workflows for cross-functional and dispersed teams.

Interact and share content seamlessly. Bluescape's persistent, secure workspace eliminates information gaps, miscommunications, and delays.

Streamline analysis and incorporate data repositories with Bluescape's flexible and extensible API, easy-to-use interface, and a wide variety of tools and templates.

BLUESCAPE ACCELERATES AIR FORCE OPERATIONS

The Bluescape platform creates a centralized space to visualize and leverage mission knowledge, content, and data.

NEXT-LEVEL AGILITY

- Secure access anytime, anywhere
- Visualize workflows, tasks, and processes with drawing and diagramming tools
- Align teams for planning and coordinating work on projects, sprints, or development

Interoperability is the cornerstone of effective operations centers, analysis cells, and planning cells. Bluescape’s digital experience accelerates productivity and scales mission-critical agility while eliminating the expense and logistics of organizing remote people and assets.

Whiteboarding, diagramming tools, and searches enable teams to visualize threats and resources with point-and-click simplicity. Our template library supports everything from sprint planning and retrospectives to operational planning and real-time situational awareness.

UNPRECEDENTED VISIBILITY

- See the big picture or dive into details, powering faster, smarter decision-making
- Mission-critical information sharing
- Real-time and asynchronous collaboration to support 24/7/365 global missions

Air Operations Centers can’t manage what they don’t see—making mission success daunting.

Without a collaboration tool that complements the dashboard view, distributed personnel struggle to turn data sets into intelligence for informed decisions.

Bluescape helps teams visualize information in context and create actionable decision-support products. With searchable and more reliable data, teams can optimize real-time situational awareness, visualize threats, identify resources, render better decisions, and formulate responses—all with unparalleled speed and security.

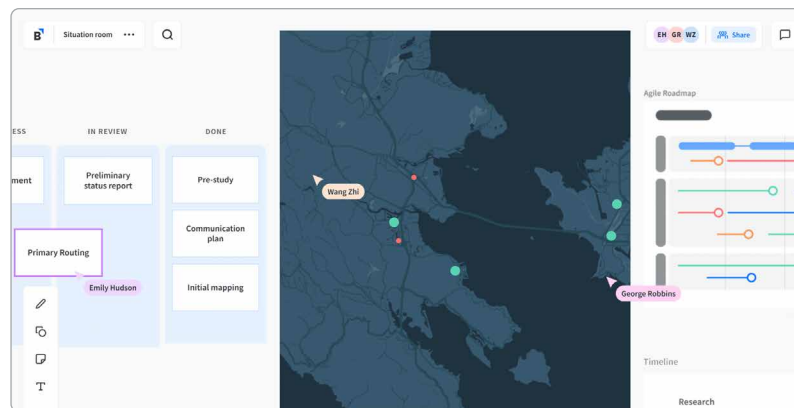

DATA ON DEMAND

- View and analyze information in a visual, interactive environment
- Bring data to the moments and places where it can have the most impact
- Integrate Bluescape with preferred applications to analyze, create, and combine
- Derive more value from AI/ML, identify data and performance drift, and bring quality inference into workflows

Bluescape APIs enable operations centers to call up data from any environment, pulling information from across teams into a single view so organizations can better understand, organize, and put their data to work. Teams can easily consolidate their fused intelligence from multiple sources to create one source of truth.

SECURITY BUILT FOR THE UNIQUE NEEDS OF THE MILITARY

Bluescape has achieved an elite security designation: DoD Impact Level 5 (IL5). This unique authorization builds on the IL4 designation from the Navy, making Bluescape the only virtual workspace solution for CUI and mission-critical information.

BLUESCAPE MAKES IT SIMPLE FOR TEAMS TO ACCESS, SHARE, AND COLLABORATE—BRINGING DATA, TOOLS, AND PEOPLE TOGETHER IN A SECURE DIGITAL SPACE.
