

# The Bluescape Private Cloud Deployment Option

**BLUESCAPE**

## What is Bluescape Private Cloud?

Bluescape Private Cloud is a complete implementation of Bluescape SaaS application using computing resources dedicated to a specific customer.

This is contrasted with the Bluescape Public Cloud, which presents a logically differentiated customer instance from pooled (non-dedicated) resources.

## Bluescape Private Cloud Details

The Bluescape Private Cloud is a managed service that shares many of the characteristics of public cloud computing, including elasticity and resource pooling, delivered in a standardized manner.

- Bluescape (or its authorized partners) manage private cloud instances on the customer's behalf
- Private cloud deployments run on Bluescape approved cloud services providers
- The current certified hosting vendor is AWS
- Other cloud service providers will be certified on a case-by-case basis

## Why Bluescape Private Cloud?

- Full data isolation and single tenant architecture
- Benefits of a managed service along with control over computing resources
- Higher workload density and greater resource utilization
- Custom monitoring and logging options
- Flexible data retention and/or data backup and restore policies
- Support for customized provisioning requirements

## Features and Benefits

Category	Feature	Benefit
Architecture	Data Isolation	A Bluescape Private Cloud instance contains only a single customer's data. This architecture has downstream benefits for security, flexibility, and more.
	Instance Independence	All computing resources in the private cloud are dedicated to the organization. Optimize the allocation of computing resources, for example, geographical location can be customized.
	Single Tenant	Only a single company running in setup.
Policy	Backup on Demand	Customized backup schedules and windows defined by the customer.
	Private Key Infrastructure	Send private client certificates to wall.
	Data Retention	Logs and backup can have custom retention policies (timing defined by the client).
	Logging Reports	Customized log filters to oversee system status.
	Restore on Demand	Restore original configuration or any previous backup if needed.
Network	Hosting	Tailored domain based on customer needs.
	Network	The private cloud can be set up and run as an extension of the customer network. The customer can manage and control the access rights for network access and secure network tunnels.
Security	Information Security	Flexibility and adhere to customer security standards.

### Take us for a spin.

We'd love to show you how Bluescape can help you connect teams and create better.
